## DETAILED ACTION

### *Specification*

The disclosure is objected to because of the following informalities: On page 1 of the specification, lines 4-18 should be updated with the proper file date, patent number if any, and patent date.

Appropriate correction is required.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5, 6, are rejected under 35 U.S.C. 102(b) as being anticipated by Guthrie et al.

Guthrie shows the security network containing at least a first and second base unit 4a and 3 and a first transponder 5a1 as illustrated in figure 1.

The low power and high power wireless communication are illustrated in figure 4b.

With respect to claim 2, note the different frequencies in figure 4b.

With respect to claim 3, FCC rule regulations are inherently associated with the different frequency band, for instance ISM band and licensed band in figure 4b.

With respect to claim 5, see figure 4b.

With respect to claim 6, see communication between first base station 4a and transponder 5a1.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 4 and 7-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Guthrie et al.

With respect to claim 4, the artisan recognizes that 10 milliwatts are within the low power range and such would have been obvious.

With respect to claim 7, the artisan recognizes that bidirectional communication between the first station and transponder would involve the change in parameters, see col. 2, lines 23-34.

With respect to claims 8 and 12, see col. 2, lines 53-57.

With respect to claims 9, 10, and 14, see col. 2, lines 40-42.

With respect to claim 11, the artisan realizes the conventionality of a standard keyboard for inputting data, which may be encrypted. Patentable invention is not involved in the use of an encrypted key.

With respect to claim 13, see col. 8, lines 5-17.

With respect to claim 15, note DSSS that is encrypted data, see col. 8, lines 24-62.

With respect to claims 16-18, the specified physical form would not involve patentable invention since such frequency range employed are within the range employed in conventional cordless phones.

With respect to claim 19, a battery is a conventional form of power and would be obvious.

With respect to claim 20, see high power wireless communication in figure 4b.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Woolley shows a transponder 12, first and second base stations 15 and 13.
